SUMMARY

Technical consultant and solutions architect with 4+ years at Google and Microsoft delivering Generative AI and analytics solutions on Google Cloud and Azure. Most recently drove monetization diagnostics for Firebase publishers—combining SQL analysis, Python/Next.js tooling, and API-level integrations to unblock revenue for strategic accounts. Trusted by product, engineering, and sales partners to translate business metrics into production-ready architecture.

SKILLS

- **Languages & Frameworks:** Python, SQL, TypeScript, JavaScript, React, Next.js, Node.js
- **Cloud & Data:** Google Cloud, Azure, Firebase, AdMob, BigQuery, Azure OpenAI, Power Platform, Dynamics 365
- **AI & Architecture:** Generative AI, RAG, Solution & Cloud Architecture, Full-Stack Development, DevOps, Identity & Access Management

WORK EXPERIENCE

Google Irvine, CA

Apr 2025 – Sep 2026

Technical Solutions Consultant

- Served as technical lead for publisher monetization across a portfolio of **8 strategic AdMob and Firebase accounts**, partnering with Product, Engineering, Sales, and BD to diagnose yield, mediation, open bidding, and latency issues with SQL-backed analysis and ship fixes into production.
- Diagnosed root causes of publisher revenue drops and shipped fixes that **restored monetization to pre-incident levels or higher** across the strategic book, protecting recurring ad revenue for high-value accounts.
- Cut report turnaround ~50% for strategic accounts by building Python/SQL internal tools and Next.js/TypeScript dashboards that automated performance insights and revenue diagnostics.
- Validated and shipped API-level integrations against AdMob and Firebase APIs—unblocking data-readiness issues and accelerating debugging for live publisher systems.

Microsoft Irvine, CA

Aug 2022 – Mar 2025

Cloud Solution Architect

- Customer-facing Cloud Solution Architect for a portfolio of **10 enterprise accounts (including Wawa)**—designed Generative AI solutions, virtual agents, and custom apps on Azure, Power Platform, and Dynamics 365.
- Delivered POC-to-production Azure Functions and workflow automation in the Value-Based Delivery catalog, improving operational efficiency for large multinational clients.
- Advised on secure cloud migrations and data-driven architectures with virtual account teams; communicated trade-offs clearly to both technical champions and business stakeholders.
- Built credibility as a trusted advisor on AI and cloud patterns—helping customers modernize analytics and decisioning without overselling experimental approaches.

EDUCATION

Georgia Institute of Technology Atlanta, GA

May 2022

Bachelor of Science, Computer Science

PROJECTS

Knowledge Nebula · 2026

- Built a privacy-first, browser-based application that transforms document collections into explorable 3D knowledge graphs, with AI analysis performed entirely on-device.
- Designed a client-side architecture using web workers for non-blocking document processing, embeddings, similarity analysis, and clustering; persisted corpora locally with IndexedDB.

Geopolitical Simulator · 2026

- Developed a Vite-based geopolitical simulator that models real-world nations' economic, political, and military systems; queried and integrated country data with SQL to drive game-state decisions.
- Implemented a modular rules engine in TypeScript for policy, trade, and conflict interactions, enabling rapid iteration on simulation scenarios.
